DECLARATION

We **AISHWARYA KL, DEEPAK DR, SINCHANA G** students of the 8th semester of **ISE Department in Mysore College of Engineering and Management** here by declare that I own full responsibility for the information and conclusions provided in this report “**AICTE ACTIVITY PION**” submitted to **Information Science Engineering Department**.

To the best of our knowledge, thus report has not been submitted in partial full filment elsewhere in any other institution organization for the award of any certificate/diploma degree. I have completely taken care of acknowledging the contribution of others in this academic work. I in the future declare that in case of any violation of intellectual property rights and particular declared, found at any stage. I as the candidates will be solely responsible for the same.

AISHWARYA KL
(4MO21IS003)

DEEPAK DR
(4MO21IS014)

SINCHANA G
(4MO21IS041)

Palce : Mysore
Date :

ACKNOWLEDGEMENT

It is our pleasure to be indebted to various people, who directly or indirectly contributed in the development of this work and who influenced my thinking, behavior, and acts during the course of project.

We are extremely thankful to our principal **Dr. M S Prabhuswamy** for providing us the academic ambience and everlasting motivation to carry out this work and shaping our careers.

We express our sincere gratitude to **Mr. Harsha Kumar H S**, Head of Department, Computer Science & Engineering, MyCEM, for his stimulating guidance, continuous encouragement and motivation throughout the course of present work.

We wish to enunciate our special thanks to our co-ordinator **Dr. Jayaram C V**, Professor, Department of Computer Science & Engineering, MyCEM, for his constant incitement and advice throughout the work.

We would also like to thank all other teaching and technical staffs of Department of Computer Science and Engineering, who have directly or indirectly helped us in the completion Of this Activity .

Lastly, we would like to thank the almighty and my parents for their moral support and my friends with whom we shared our day-to-day experience and received lots of suggestions that improved my quality of work.

AISHWARYA KL (4MO21IS003)
DEEPAK DR (4MO21IS014)
SINCHANA G (4MO21IS041)

AICTE ACTIVITY POINT PROGRAM

AICTE stands for the All-India Council for Technical Education, which is a statutory body and a national level council for technical education in India. AICTE has various activities that it carries out to improve the quality of technical education in the country.

The objectives of AICTE student activity is to expose students to real-time life challenges, to provide the opportunity to gather data, analyse data, propose solutions and implement solutions. Also, it paves the way for personal development and creative engineers who are proud volunteers with a sense of achievement and ready to take up projects having a social impact and creating digital awareness. Besides, it helps the students to strengthen their soft skills, leadership qualities and team spirit. Moreover, these activities inculcate entrepreneurial mind set and societal commitment.

The following activities were conducted for the fulfilment of this program:

1. Swachh Bharat Abhiyan
2. QR code distribution to small scale shops
3. Social Awareness
4. Promotion of appropriate technologies.
5. To assist the marketing of rural people.

ACTIVITY 1

SWACHH BHARAT ABHIYAAN

Fig 1.1: Swachh Bharat Abhiyaan

Swachh Bharat Abhiyan (Clean India Mission) is a national campaign launched by the Government of India in 2014 with the aim of cleaning the streets, roads, and infrastructure of India's cities, towns, and rural areas. The campaign was launched on October 2, 2014, coinciding with the 145th birth anniversary of Mahatma Gandhi, who was a champion of cleanliness and hygiene. The mission aims to achieve the vision of a "Clean India" by 2nd October 2019, the 150th birth anniversary of Mahatma Gandhi. The mission has two main components - Swachh Bharat Abhiyan (Clean India Campaign) and Swachh Vidyalaya (Clean Schools Campaign).

The Swachh Bharat Abhiyan campaign focuses on eliminating open defecation through the construction of toilets and promoting the use of toilets. It also aims to bring about behavioural change in people with respect to cleanliness and hygiene, by encouraging people to adopt good sanitation practices, such as using toilets and not littering.

The Swachh Vidyalaya campaign focuses on promoting sanitation and hygiene in schools. The campaign involves the construction of separate toilets for girls and boys, providing clean drinking water and promoting good hygiene practices. The Swachh Bharat Abhiyan has become a mass movement in India with people from all walks of life participating in the campaign. The campaign has seen the participation of government agencies, educational

institutions, NGOs, corporates, and individuals. The campaign has also gained international recognition and has inspired other countries to launch similar initiatives.

Overall, the Swachh Bharat Abhiyan is a significant initiative that aims to bring about a positive change in the cleanliness and hygiene practices of the country, and promote a cleaner and healthier India. The Swachh Bharat Abhiyan (Clean India Mission) has several objectives, which are as follows:

1. Elimination of open defecation: One of the main objectives of the Swachh Bharat Abhiyan is to eliminate open defecation in India by constructing toilets and promoting the use of toilets.
2. Cleanliness and hygiene: The mission aims to promote cleanliness and hygiene practices in all areas of India, including villages, towns, and cities. This includes proper waste management, sweeping and cleaning of public places, and proper sanitation practices.
3. Behavioural change: mission aims to bring about a behavioural change in people with respect to cleanliness and hygiene, by promoting good sanitation practices, such as using toilets and not littering.
4. Health and sanitation: The mission aims to improve the health and sanitation conditions in India by promoting cleanliness and hygiene practices. This includes the provision of clean drinking water, proper sewage and waste management, and promoting good hygiene practices.

Infrastructure development: mission aims to improve the infrastructure of India's cities, towns, and villages by promoting the construction of toilets, waste management systems, and other infrastructure that supports cleanliness and hygiene.

Fig 1.3: Cleaning Public Spaces to Promote Cleanliness and Hygiene

ACTIVITY 2

QR CODE DISTRIBUTION

2.1 QR CODE DISTRIBUTION TO SMALL SCALE SHOPS

A QR code (Quick Response code) is a two-dimensional barcode that can be read by a smartphone or other mobile devices using a QR code reader app. It was first developed in Japan in 1994 by Denso wave, a subsidiary of Toyota, for tracking vehicles during manufacturing. QR codes consist of black squares arranged on a white background. The squares can be arranged in various patterns and can store a significant amount of information, such as text, URLs, contact information, or even entire files. This makes QR codes a versatile and efficient tool for sharing information.

QR codes can be created using various QR code generators available online and can be printed or displayed in various sizes and formats. When a user scans a QR code with a smartphone or other device, the code is decoded and the associated information is displayed on the screen. QR codes have numerous applications in various industries, such as marketing, advertising, education, healthcare, and more. They are commonly used for product promotions, event registration, mobile payments, and contactless menus. QR codes also offer advantages over traditional barcodes, such as faster scanning and higher storage capacity.

QR codes can be an effective way for small scale shops to distribute information to their customers. Here are some steps that small scale shops can follow to distribute QR Codes:

1. **Create a QR code:** The first step is to create a QR code that leads to the desired information. This can be done using a QR code generator tool available online. There are various types of information that can be linked to QR codes, such as websites, social media pages, contact information, product information and more.
2. **Print the QR code:** Once the QR code is created, small scale shops can print it out and display it in a visible location in their shop, such as near the entrance, on the cash register, or on product displays.

3. **Encourage customers to scan the code:** small scale shops can encourage their customers to scan the QR code by adding a call to action, such as “Scan this code to learn more about our products” or “scan this code to receive exclusive discounts”.
4. **Offer incentives:** To further encourage customers to scan the code, small scale shops can offer incentives such as discounts, free samples, or entry into a prize draw.
5. **Monitor and analyse results:** Finally, small scale shops can monitor and analyse the results of their QR code distribution campaign to see how many people have scanned the code and what actions they took as a result. This can help shops to refine their strategy and improve their future QR code campaigns.

Overall, QR code distribution can be a cost- effective and efficient way for small scale shops to share information and engage with their customers.

In conclusion, implementing QR code distribution in rural stores for money transactions holds immense potential for fostering financial inclusion and economic growth in rural areas. By enabling simple and secure digital payments, QR codes can reduce the reliance on cash, increase convenience, and enhance financial literacy among rural residents. This approach not only empowers individuals to participate more actively in the formal economy but also stimulates small business growth by providing them with access to digital payment infrastructure. Ultimately, QR code distribution in rural stores can contribute to creating more resilient and sustainable rural economies, driving progress and prosperity for all stakeholders involved.

Fig 2.1 QR code distribution

ACTIVITY 3

SOCIAL AWARENESS ON TB DISEASE

Social awareness refers to the consciousness and understanding of social issues and problems that exist in society. It involves having knowledge about social issues such as poverty, inequality, discrimination, violence, and environmental degradation, among others. Social awareness also involves the ability to empathize with others and recognize the impact of these issues on individuals, communities, and society as a whole. It is important to be aware of social issues in order to be able to take action and make a positive difference in the world.

It can be developed through various means, such as education, personal experience, exposure to diverse perspectives, and media consumption. By being aware of social issues, individuals can become advocates for positive change and take action to address social problems.

Fig 3.1 Social Awareness (TB Awareness)

3.1 AWARENESS ABOUT TB

TB (tuberculosis) is a bacterial infection that affects the lungs and can also impact other parts of the body. It is a serious health concern that affects millions of people worldwide, particularly in developing countries. TB is caused by the bacterium *Mycobacterium tuberculosis* and is spread through the air when an infected person coughs or sneezes. Tuberculosis (TB) is a serious infectious disease caused by a bacterium called *Mycobacterium tuberculosis*. It primarily affects the lungs, but it can also affect other parts of the body such as the brain, kidneys, and bones.

Fig 3.2 TB Symptoms

TB is spread through the air when a person with active TB disease coughs, sneezes, talks, or spits, releasing small droplets containing the TB bacteria into the air which can be inhaled by another person. The symptoms of TB include a persistent cough, fever, night sweats, fatigue, weight loss, and loss of appetite. However, not everyone infected with TB will develop active TB disease. Some people may develop latent TB infection (LTBI), where the bacteria are in the body but are inactive and do not cause any symptoms' is a treatable disease, and early diagnosis and treatment are essential to prevent the spread of the disease and to reduce the risk of serious complications.

TB is usually treated with a combination of antibiotics for a period of six to nine months. It is important to complete the full course of treatment to ensure that the bacteria are completely eliminated from the body. Preventing the spread of TB requires awareness and education about the disease and taking precautions to reduce the risk of infection. This includes covering the mouth and nose when coughing or sneezing, staying home when sick,

and avoiding close contact with people who have active TB disease until they are no longer infectious. Vaccines are also available to prevent TB in certain cases, but they are not 100% effective.

How does the TB spreads:

Tuberculosis (TB) is a contagious bacterial infection that primarily affects the lungs, but it can also affect other parts of the body. TB is spread through the air when a person with active TB disease coughs, sneezes, talks, or spits. These releases small droplets containing the TB bacteria into the air, which can then be inhaled by another person.

However, it is important to note that not everyone who inhales the TB bacteria becomes infected with TB.

In fact, most people who inhale the bacteria do not become sick and instead develop latent TB infection (LTBI), where the bacteria are in the body but are inactive and do not cause any symptoms. However, if a person's immune system weakens, the bacteria can become active and cause TB disease.

TB can also be spread through contact with contaminated surfaces, such as doorknobs, bedding, or clothing, although this mode of transmission is less common. TB is not spread through shaking hands, sharing food, or other casual contact. It is important to take precautions to prevent the spread of TB, such as covering the mouth and nose when coughing or sneezing, staying home when sick, and avoiding close contact with people who have active TB disease until they are no longer infectious. Early diagnosis and treatment of TB can also help prevent its spread.

The government of India provides several facilities for TB treatment to ensure that TB patients have access to affordable and quality healthcare services. Some of these facilities include:

1. **Directly Observed Treatment Short-course (DOTS) centres:** DOTS is a treatment strategy recommended by the World Health Organization (WHO) for the management

of TB. The government of India has set up several DOTS centres across the country, where patients can receive free diagnosis, treatment, and medication.

2. **Revised National TB Control Program (RNTCP):** RNTCP is a program implemented by the government of India to control TB in the country. Under this program, TB patients can receive free diagnosis, treatment, and medication at designated government hospitals and clinics.
3. **National TB Referral Laboratory Network:** The government of India has set up a network of referral laboratories across the country to provide quality diagnosis and testing services for TB.
4. **Jan Aushadhi stores:** Jan Aushadhi stores are government-run pharmacies that provide affordable and quality generic medicines, including TB medication.
5. **Pradhan Mantri Jan Arogya Yojana (PM-JAY):** PM-JAY is a government-funded health insurance scheme that provides free treatment to eligible families for various diseases, including TB.

In addition to these facilities, the government of India has also launched various initiatives to increase awareness about TB and encourage early diagnosis and treatment, such as the TB-free India campaign. By taking advantage of these facilities, TB patients can receive quality healthcare services and overcome the disease.

ACTIVITY 4

PROMOTION OF APPROPRIATE TECHNOLOGIES

The promotion of appropriate technologies in rural areas, especially in regard to laptops, is crucial for advancing socioeconomic development and narrowing the digital divide. Laptops hold immense potential to empower individuals and communities in rural regions, offering opportunities for education, communication, and economic growth.

In rural areas, access to information is often limited. Laptops can serve as gateways to vast amounts of knowledge and educational resources. They enable rural residents to access online courses, educational materials, and information, thereby enhancing their skills and knowledge base. This access to information fosters a culture of lifelong learning and increases employability.

Moreover, laptops facilitate communication and networking. Rural entrepreneurs can use laptops to connect with markets, suppliers, and customers beyond their immediate vicinity. This expands business opportunities, encourages entrepreneurship, and promotes economic growth within rural communities.

However, promoting laptops in rural areas requires addressing several challenges. Affordability is a significant concern, as many rural residents may not have the financial means to purchase laptops at market prices. To tackle this, initiatives such as subsidies, microfinance schemes, or community-owned laptop centres can be implemented.

Infrastructure is another challenge. Many rural areas lack reliable electricity and internet connectivity. Therefore, promoting laptops should go hand in hand with infrastructure development, such as extending electricity grids and expanding internet access through mobile networks or community Wi-Fi hotspots.

Digital literacy is also essential. Many rural residents may not be familiar with operating laptops or using digital tools. Therefore, training programs on basic computer skills and digital literacy are crucial to ensure the effective utilization of laptops.

Additionally, the content and applications available on laptops should be relevant to rural needs. Developing locally tailored software for agriculture, healthcare, education, and other sectors can significantly enhance the impact of laptops in rural areas.

In conclusion, promoting appropriate technologies like laptops in rural areas can lead to significant improvements in education, communication, and economic opportunities. It requires a multifaceted approach that addresses affordability, infrastructure, digital literacy, and locally relevant content. By doing so, we can empower rural communities and foster sustainable development.

Fig 4.1: Promoting appropriate technologies.

ACTIVITY 5

TO ASSIST THE MARKETING OF RURAL PEOPLE.

Supporting marketing efforts in rural areas, particularly for provision stores, is vital for economic growth and community development. Provision stores are often the lifeline of rural communities, providing essential goods and services. However, they often face challenges in reaching customers and competing with larger retailers. Several strategies can assist in their marketing without relying on laptops.

Localized Marketing Campaigns:

Provision stores can focus on localized marketing campaigns tailored to the needs and preferences of the rural community. This can include flyers, posters, and community events to promote their offerings and build relationships with customers.

Customer Loyalty Programs:

Implementing customer loyalty programs can encourage repeat business. Offering discounts, rewards, or special promotions for frequent shoppers can help provision stores retain customers and build a loyal customer base.

Product Diversification:

Expanding product offerings to include locally sourced or unique items can differentiate provision stores from larger competitors. Highlighting these products and their benefits through signage and promotions can attract more customers.

Community Engagement:

Engaging with the local community through sponsorships, partnerships with local organizations, or participation in community events can increase visibility and goodwill for provision stores.

Enhanced Customer Service:

Providing excellent customer service is key to attracting and retaining customers. Training staff to be friendly, helpful, and knowledgeable about products can enhance the overall shopping experience.

Digital Presence:

While not reliant on laptops, provision stores can still have a digital presence through social media or simple websites. These platforms can be managed using smartphones or desktop computers available at the store.

Infrastructure and Accessibility:

Ensuring provision stores have adequate infrastructure, such as good signage, clean and well-organized stores, and convenient parking, can improve the shopping experience for customers.

Collaboration with Local Suppliers:

Collaborating with local suppliers and producers can provide provision stores with unique products and support local businesses. Promoting these partnerships can resonate well with the community.

In conclusion, assisting in the marketing of rural provision stores involves a combination of localized strategies tailored to the community's needs. By focusing on customer engagement, product diversification, community involvement, and providing excellent service, provision stores can thrive and contribute to the economic vitality of rural areas.

Fig 5.1: To assist the marketing of rural people.

CONCLUSION

Swachh Bharat Abhiyan: The initiative to promote cleanliness not only enhanced the aesthetic appeal of the surroundings but also fostered a sense of civic responsibility among the participants. By instilling hygiene practices, the program laid the groundwork for improved public health outcomes.

QR Code Distribution to Small Scale Shops: Empowering small-scale shops with QR code technology facilitated seamless digital transactions, enhancing financial inclusion and efficiency in rural economies. This initiative not only streamlined payment processes but also bolstered economic resilience by modernizing traditional retail practices.

Social Awareness: The dissemination of crucial social awareness messages served to educate and empower communities on pertinent issues ranging from health and hygiene to environmental conservation and civic engagement. By fostering informed decision-making and proactive participation, this initiative laid the foundation for positive societal change.

Promotion of Appropriate Technologies: The promotion of suitable technologies, such as laptops, in rural areas was instrumental in bridging the digital divide and fostering socioeconomic development. By providing access to information, education, and communication tools, this initiative empowered individuals and communities to harness the transformative power of technology.

Assistance in Rural Marketing: Supporting rural marketing efforts, particularly for provision stores, facilitated economic growth and community development. Through localized marketing campaigns, customer loyalty programs, and community engagement initiatives, provision stores were empowered to thrive and contribute to the vibrancy of rural economies.

In essence, these activities collectively reflect a comprehensive approach to community development, encompassing aspects of sanitation, technology adoption, financial inclusion, social empowerment, and economic advancement. By addressing multifaceted challenges and leveraging opportunities for growth, the program has made significant strides towards building resilient, inclusive, and sustainable communities
